

Ruben Luna

Dallas–Fort Worth, TX | 214-382-7504 | rubenaluna@outlook.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack Software Engineer with 6+ years of experience developing AI-integrated web applications and data visualization tools. Experienced in leading front-end architecture, building APIs and automation solutions, and delivering projects from concept to delivery. Skilled at quickly adapting to new technologies and contributing effectively in Agile environments.

WORK EXPERIENCE

Worlds Enterprises Inc. | Dallas–Fort Worth, TX

AI startup developing computer vision and digital twin technology to help industrial and government clients monitor operations and physical environments.

UI Team Lead | April 2025 – Present

- Led front-end development for AI and data visualization tools in React and TypeScript, including an effort to consolidate multiple applications into a monorepo with a shared design system and reusable component library.
- Directed the design and optimization of AIMS, a monitoring interface for the U.S. Air Force, improving performance with front-end refactoring and Redis caching.
- Built an AI chat interface that integrates with a large language model (Gemma) to identify and describe computer vision detected objects.
- Developed Worlds NQ, a data annotation tool that allows data scientists to tag training data for computer vision models, reducing model deployment time by 75%.
- Managed a two-person engineering team, turning product goals into requirements, assigning tasks, conducting code reviews, and aligning priorities with leadership and business stakeholders.

Software Engineer | May 2019 – April 2025

- Contributed to the design and development of the company's computer vision and digital twin platform within an Agile environment.
- Built and documented the Worlds API, a GraphQL service in Java Spring Boot that provides platform data to internal and external teams across multiple projects, reducing custom integration work by 90%.
- Developed and deployed automation solutions in Java and Python for industrial clients, integrating with physical infrastructure to improve their safety and production workflows.
- Created Worlds Navigator, an interactive web application that visualizes site activity and events within client digital twins using React, TypeScript, and Babylon.js.
- Reduced client onboarding time by 50% by developing Worlds Builder, a full-stack tool that allows teams to create and manage digital twins.
- Developed Worlds Calibration, a Python microservice that attaches GPS data to computer vision detected objects for accurate 3D simulation and was later incorporated into several awarded patents.
- Implemented CI/CD pipelines and automated testing using Jenkins, Semaphore, GitHub Actions, Jest, and JUnit to improve deployment reliability across microservices.

EDUCATION

Bachelor of Science in Computer Science | The University of Texas at Dallas | Richardson, TX | 2019

SKILLS

Languages: TypeScript, Java, Python, C#, HTML/CSS

Frameworks: React, Node.js, Spring Boot, GraphQL, Babylon.js, MobX

Databases: PostgreSQL, RESTful API Development

Infrastructure: AWS Cloud Infrastructure (S3, ECS, ECR), Docker, Kubernetes, Microservices Architecture, Linux Environments, Redis, RabbitMQ, CI/CD (Jenkins, Semaphore)

Tools: Git/GitHub, Jira, Asana, Cursor, Unity, API Documentation, Developer Experience (DX), Testing Frameworks (Jest, JUnit)
